1. Introduction

BVC24 is Bharath Vending Corporation's cloud-based Vending Operations Dashboard. It gives you a single, secure place to monitor, manage and control your entire vending machine network remotely — from stock levels and sales revenue to hardware diagnostics — without needing to physically visit each machine.

What this document covers

- How to log in and navigate the dashboard
- A full walkthrough of every module, screen and button
- Step-by-step instructions for day-to-day operations (refilling, pricing, reporting)
- Remote diagnostics — motor testing, channel enable/disable, video management

Key benefits

- Real-time visibility of machine status (online/offline) and location
- Centralised catalog — manage products and categories once, apply to all machines
- Remote stock refill tracking, per channel/slot
- Remote hardware testing (motors/conveyors) without an on-site technician
- Sales, revenue and payment-mode reporting (Cash, Card, UPI, Account)
- Downloadable/exportable reports for accounting and audits

2. Getting Started — Accessing the Dashboard

The dashboard is accessed entirely through a web browser — no software installation is required.

Dashboard URL	https://crm.bvc24.in/
Login Type	Email + Password
Demo Username	vending@smartboxlockers.in
Demo Password	Admin@123

Step 1: Open a web browser (Chrome, Edge, or Safari recommended) and go to <https://crm.bvc24.in/>

Step 2: Enter your registered Username (email address) and Password.

Step 3: Click Login / Sign In to enter the dashboard.

Step 4: On first login, you will land on the Dashboard Home screen described in Section 3.

3. Dashboard Home (Overview)

The Dashboard is the landing page after login. It gives an at-a-glance summary of your entire vending operation, plus a list of all registered machines.

Figure 1 — Dashboard Home

Top summary cards

Total Machine	Total number of vending machines registered under your account.
Active Machine	Machines currently online/active out of the total.
Total Sales	Cumulative revenue across all machines and time.
Today Sales	Revenue generated today across all machines.
UPI / Card / Account / Cash	Revenue split by payment mode, so you can reconcile collections.

Machine Selection Dashboard

Below the summary cards is the full list of machines linked to your account.

- Search machines — quickly find a machine by name.
- Clear — reset the search/filter.
- Refresh — pull the latest status from each machine.

Table columns

ID	Unique internal machine ID.
Machine Name	Friendly name assigned to the machine (e.g. DEMO MACHINE).
Type	Machine type/model code (e.g. VM = Vending Machine).
Status	Online or Offline, with a "Last Online" timestamp for offline machines.
Location	Installed/physical location of the machine (e.g. Coimbatore).

Updated On	Last time this record was refreshed.
------------	--------------------------------------

Note: Clicking a machine row opens its Machine Overview screen with dedicated Sales, Stock, Live, Product Sales and Vending Data tabs.

4. Machine Overview — Sales, Stock & Product Performance

Selecting a machine from the Dashboard opens its dedicated Machine Overview screen. This has five tabs: Sales, Stock, Live, Product Sales, and Vending Datas.

4.1 Sales tab — Revenue & analytics

Figure 2 — Machine Overview: Sales tab

- Total Sales, Today Sales — revenue counters for this specific machine.
- UPI / Cash / Account / Card — payment-mode breakdown for this machine.
- Machine Usage chart — how often the machine is used over a selected period (Today / This Week / This Month / This Year).
- Sales chart — revenue trend over time.
- Product Sales (Revenue) chart — revenue contribution by product.

Note: Each chart has its own period selector, so you can compare performance across different timeframes.

4.2 Stock tab — Inventory levels

Figure 3 — Machine Overview: Stock tab

This tab shows the current stock/inventory status of every enabled channel — Orange, Cup, Straw, Lid, and Sugar Sachet — inside the selected machine. If no products are currently loaded, it will show No stock products found.

Note: This is the quickest way to check whether a specific machine needs a stock refill before it runs out — see Section 6, Refill Management, to action a refill.

4.3 Vending Datas tab

- Vending Datas — raw vending transactions and recovery actions (e.g. failed dispense recovery) for this machine.

5. Product Management

5.1 Product Details — View, search & manage products

Figure 8 — Product Details

Table columns

ID	Unique product ID.
Product Name / Image	Name and thumbnail of the product.
Product Price	Selling price.
GST	Tax percentage applied.
Created At / Updated At	Audit timestamps.
Actions	Edit or Delete the product.

Note: The full product catalog created here is what becomes available to assign to machine channels in Refill Management (Section 6).

Orange VM's catalog is fixed to the machine's five physical components — Orange, Cup, Straw, Lid, and Sugar Sachet. In practice, Product Details is used almost entirely to update an existing item's name, price, or image, rather than to register new products.

5.2 Updating a Product (Image, Price & Name)

Step 1: Go to Product Management → Product Details.

Step 2: Find the row for the item you want to update — Orange, Cup, Straw, Lid, or Sugar Sachet.

Step 3: Click the Edit (pencil) icon in that row's Actions column.

Step 4: Update the Product Name and/or Product Price as needed.

Step 5: Click Change Image to upload a new picture for that item, if required.

Step 6: Save your changes.

Note: An update applies machine-wide — every machine using that item's channel picks up the new name, price, or image the next time it syncs, so you don't need to update each machine separately.

6. Refill Management (Stock Refill)

This is where you keep each machine's physical stock in sync with the system — critical for making sure customers never hit an "out of stock" channel.

Figure 9 — Refill Management

Step 1: Go to Refill Management from the sidebar.

Step 2: Select the machine you want to manage from Select Machine.

Step 3: All channels for that machine are listed as cards — Orange, Cup, Straw, and (if enabled) Lid and Sugar Sachet — each showing current quantity (e.g. 0/0).

Step 4: Use Change to assign or update which item sits in that channel.

Step 5: Use Refill to record newly loaded stock — this is the step to take every time you physically restock the machine, so counts stay accurate.

Step 6: Use Clear to empty a card.

Note: Stock accuracy here directly powers the Stock tab in Machine Overview (Section 4.2) and the Stock Reports (Section 8.2) — refill promptly after every physical top-up round so reports and alerts stay reliable.

7. Video / Media Management

Vending machines with screens can display promotional or product videos. This module manages what media is currently playing on each machine.

Figure 12 — Video / Media Management

Step 1: Go to Video Upload and Select Machine.

Step 2: Under Machine Media Sync, click Sync to push/pull the machine's current media state.

Step 3: Click View Logs to see the history of sync attempts.

Note: If the machine is offline, Sync cannot complete — you'll see a banner such as "Machine is offline — cannot sync right now." Wait for the machine to reconnect (check its status on the Dashboard) and try again.

A related module, Video Analytics, reports on video playback/engagement per machine once media is active.

8. Reports

8.1 Transaction History Report

Found under Reports → History Management → Report. This is the full transaction ledger across your machines — the go-to screen for reconciliation, refunds and customer-support look-ups.

Figure 13 — History Management: Report

Step 1: Select the machine (or leave as default to view all).

Step 2: Set a From Date / To Date range.

Step 3: Optionally filter by Paid, Refunded or Payment Type (Cash/UPI/Card/Account).

Step 4: Use Search to look up a specific order.

Step 5: Click Refresh to reload, Clear Filters to reset, or Download to export the report.

Table columns

Order Number	Unique transaction reference.
Machine Name / Product Name	What was purchased and from where.
Quantity / Amount	How many units and the total value.
Paid / Refunded / Refunded Amount	Payment and refund status.
Payment Type	Cash, Card, UPI, or Account.
Customer Rating	Feedback rating left by the customer, if any.
Transaction Time	Exact timestamp of the sale.

8.2 Stock Reports

Available from the sidebar under Reports → Stock Reports. This provides consolidated inventory reporting across machines — current stock levels, low-stock/empty channels, and refill history — so operations teams know exactly which machines need attention next, without opening each Machine Overview individually.

9. Navigation Map & Sidebar Reference

Quick reference for every item in the left-hand sidebar menu:

MAIN

- Dashboard — overview + machine list (Section 3)

CATALOG

- Product Management → Product Details (Section 5)
- Video Upload — media management (Section 7)
- Video Analytics — video engagement stats (see Section 7)
- Refill Management — stock refill per channel (Section 6)

REPORTS

- History Management → Report — transaction history (Section 8.1)
- Stock Reports — consolidated inventory reporting (Section 8.2)

10. Support & Contact

For access issues, technical support, or feature requests related to the BVC24 dashboard, please reach out to your Bharath Vending Corporation account representative.
